

Beneficial nematodes

INSTRUCTIONS

1. Fill the sprayer with water.
2. Place the sponge containing the nematodes into the sprayer, close and shake vigorously.
3. Fix the garden hose to the sprayer, open the valve and start the application.

WHEN AND HOW TO USE NEMATODES?

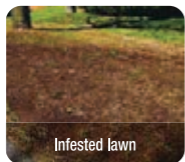

- Application timings: Spring and fall
- Soil temperature: Between 12°C and 28°C
- Period: In the morning or in the evening, or when it is cloudy
- Before application: Water the surface to be treated
- After application: Keep the soil humid during 10 days

STORAGE

Nematodes are stored in a sponge in order to guarantee 60 days viability. It is important to store nematodes in a dark refrigerated area between 4 °C and 12 °C until use.

MODE OF ACTION

Nematodes are beneficial microorganisms that, when introduced into the soil, actively search for, penetrate and destroy larvae.
